Honors-Awards

First place, Sophos internal Pacific
Thunder CTF 2025

Raghav Patel

Cyber Security Engineer @Sophos | Incident Response & Detection
Engineering | Automation with AI | NFSU | UTU
Ahmedabad, Gujarat, India

Summary

Cybersecurity Engineer with 5 years of experience specializing in Detection Engineering, proactive Threat Hunting, Incident Response, and AI-driven automation at Sophos. Proven track record of operationalizing threat intelligence across 40,000+ customer environments, reducing false positives, and engineering detections from post-incident root-cause analysis. Experienced in architecting security automation workflows, integrating AI to optimize investigation cycles and building pipelines that cut manual tasks from full-day efforts to under 30 minutes. Holds an M.Sc. from National Forensic Sciences University (NFSU).

Experience

Sophos

5 years

Threat Analyst 3

July 2026 - Present (3 months)

Ahmedabad

- Lead incident responder on escalated and high-severity engagements — containment decisions, forensic analysis, root cause, and customer debrief.
- Convert post-incident findings into detection coverage: identify the attacker behaviour that was missed, write or tune the logic, and validate it against live telemetry.
- Reduce false positives on noisy rules through data-driven audits rather than intuition, so analyst attention goes where the risk is.
- Design AI-assisted automation workflows that shorten investigation cycles without weakening analytical rigour.

Threat Analyst 2

March 2025 - July 2026 (1 year 5 months)

India

- Incident Responder at Sophos MDR team. Worked on multiple cyber security incidents and showed quick decision taking and response action

capabilities. Worked on automation projects which enhanced investigation time for analysts. Actively worked on threat intel and performed threat hunts based on IOCs for 40000+ customers.

- Worked on detection improvement to reduce false positives and identifying missed activities to cover in our detection capabilities
- Conducted proactive threat hunts leveraging IOCs and threat intelligence across 40,000+ customer environments within Sophos MDR.
- Fine-tuned detection rules to systematically minimize false positives and expand coverage over previously unmonitored threat vectors.
- Lead multiple Security incidents from containment to root cause analysis.
- Developed a tool and implemented on Sophos Central which helped 100+ MDR analysts to reduce efforts.
- Improved quality of playbooks by improving queries with better results which reduced analyst time to correlate multiple logs.

Cyber Risk Analyst 2

February 2024 - February 2025 (1 year 1 month)

India

- Launch engineer in the pilot cohort for Sophos Managed Risk, built in partnership with Tenable. worked with leadership to take the service from early access to a live, multi-million-dollar offering.
- Mapped vulnerability classes to MITRE ATT&CK phases, giving analysts and customers a shared view of how an exposure becomes an attack path.
- Built a reproducible local lab so analysts could self-train on vulnerability management, and impliment the vulnerability intel from multiple sources in Sophos Managed risk.
- Automated core operational workflows like vulnerability and attack-surface report processing, reducing manual analysis time from over 24 hours to under 30 minutes with minimal analyst intervention required.
- Rebuilt the HTML vulnerability report generator from CVSS v2 to v3 scoring so output aligned with Tenable data.
- Hydrated the security data lake with vulnerability and telemetry data to support downstream detection use cases.
- Worked on Attack surface management project to identify and reduce attack surface for hundreds of new customers. Improved quality of product by taking feedback and collobration.
- Earned the Tenable Vulnerability Management Specialist certification in role.

Senior Information Security Engineer

June 2023 - January 2024 (8 months)

Bengaluru

- Shift lead for a team of four in MDR operations
- Ran threat-intelligence-driven hunts across thousands of customer tenants.
- Built process automation that improved SOC throughput, response accuracy and SLA adherence.
- Worked on multiple code review projects.
- Earned CompTIA CySA+ in role.

Information Security Engineer

October 2021 - June 2023 (1 year 9 months)

Bengaluru

- Ran proactive security operations across Sophos MDR customers: threat hunting, threat intelligence integration and posture hardening.
- Automated a manual posture-improvement workflow from roughly 30 minutes to 2 minutes per case in Python within months of joining, then co-built the GUI version of the Asset Discovery tool.
- Wrote the health-check playbook used by new joiners, and trained threat analysts and interns on health checks, detection reporting and escalation handling.
- Contributed process input that fed into automating the Account Health Check feature.
- Covered team operations in the team lead's absence.
- Earned ISC2 Certified in Cybersecurity

Education

National Forensic Sciences University (NFSU)

Master's degree, Information Technology · (2019 - 2021)

Uka Tarsadia University

Master's degree, Information Technology · (2018 - 2019)

Uka Tarsadia University

Bachelor of Science - BS, Information Technology · (2015 - 2018)
